(Declared as Deemed to be University under Section 3 of UGC Act 1956)

CO1 - ASSESSMENT 1

FOUNDATIONS OF ETHICAL HACKING

Course Faculty : Dr. M. MAYURANATHAN
Course Name : Ethical Hacking Course
Code : ITA1440
Slot : Slot B
Total Marks : 100

CO1 :

Apply the principle of the foundational concepts of ethical hacking, including types of hackers, ethical principles, legal frameworks, and the role of responsible disclosure in cybersecurity.

Code of Conduct:

I SREESHA.B 1921260034 *(Name / Reg No) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment.*
I understand that any violation of academic integrity rules will result in disciplinary action.

SREESHA
Signature of the student

Answer all Questions (Each Questions carries 4 marks)

1) Rahul is having coffee with his friend in the college canteen. His friend leaves for the washroom, leaving his mobile phone on the table. Rahul unlocks the phone using his friend's >ingerprint while he is sleeping (previously registered for fun), reads all WhatsApp chats, but does not send any message or delete any data.

A. Section 43 – Unauthorized Access
B. Section 65 – Tampering with Source Code
C. Section 66 – Computer Related Offence (Hacking)
D. Section 66B – Receiving Stolen Computer Resource
E. Section 66C – Identity Theft
F. Section 66D – Cheating by Personation (Online Fraud)
G. Section 66E – Violation of Privacy
H. Section 66F – Cyber Terrorism

Correct answer: A — Section 43: Unauthorized Access (best fit among the options).

Reason / legal application: Rahul accesses his friend's phone and private messages without permission. The fact that he does not send messages or delete data does not make the access authorized. Section 43 may apply to unauthorized access to a computer resource. Section 66E is not automatically applicable because it concerns specified acts involving images of a person's private area, not simply reading private messages.

Ethical and security interpretation: Ethical principle: respect authorization boundaries and confidentiality. Rahul should not use another person's biometric access or read private communications without consent.

2) A Final-year student discovers the default administrator password of the college ERP system. Out of curiosity, he logs in and views all students' internal marks. He neither changes nor downloads any data.

A. Section 43 – Unauthorized Access
B. Section 65 – Tampering with Source Code
C. Section 66 – Computer Related Offence (Hacking)
D. Section 66B – Receiving Stolen Computer Resource
E. Section 66C – Identity Theft
F. Section 66D – Cheating by Personation (Online Fraud)
G. Section 66E – Violation of Privacy
H. Section 66F – Cyber Terrorism

Correct answer: A — Section 43: Unauthorized Access.

Reason / legal application: The student uses an administrator password to enter the ERP system without authorization and views students' internal marks. Viewing data can still be unauthorized even if nothing is changed or downloaded. Section 43 is the strongest listed fit.

Ethical and security interpretation: Ethical principle: discovering a weak or default password does not grant permission to use it. The student should report it to the authorized IT administrator.

3) An employee copies confidential customer details from the company database onto a USB drive and later sells the information to a competing company.

A. Section 43 – Unauthorized Access
B. Section 65 – Tampering with Source Code
C. Section 66 – Computer Related Offence (Hacking)
D. Section 66B – Receiving Stolen Computer Resource
E. Section 66C – Identity Theft
F. Section 66D – Cheating by Personation (Online Fraud)
G. Section 66E – Violation of Privacy
H. Section 66F – Cyber Terrorism

Correct answer: A — Section 43: Unauthorized Access, if the copying was unauthorized.

Reason / legal application: Copying and selling customer information breaches confidentiality. Section 43 may apply if the extraction was an unauthorized act covered by the section. Other laws concerning personal data, confidentiality, employment duties, or fraud may also apply depending on the facts.

Ethical and security interpretation:

4) A software engineer secretly changes the source code of an online banking application so that ₹10 from every transaction is transferred to his own account.

A. Section 43 – Unauthorized Access
B. Section 65 – Tampering with Source Code
C. Section 66 – Computer Related Offence (Hacking)
D. Section 66B – Receiving Stolen Computer Resource
E. Section 66C – Identity Theft
F. Section 66D – Cheating by Personation (Online Fraud)
G. Section 66E – Violation of Privacy
H. Section 66F – Cyber Terrorism

Correct answer: B — Section 65: Tampering with Computer Source Documents, if its statutory requirements are met; Section 66 may also be relevant.

Reason / legal application: The engineer secretly alters source code to divert money. Section 65 applies to specified acts involving concealment, destruction, or alteration of computer source code when the statutory conditions are satisfied. Section 66 may apply if an act covered by Section 43 is committed dishonestly or fraudulently.

Ethical and security interpretation: Ethical principle: source-code changes must be authorized, reviewed, documented, and audited. The act also undermines software integrity and financial security.

5) A cybercriminal creates a fake SBI login page that looks exactly like the original website. Thousands of users enter their usernames, passwords, and OTPs.

A. Section 43 – Unauthorized Access
B. Section 65 – Tampering with Source Code
C. Section 66 – Computer Related Offence (Hacking)
D. Section 66B – Receiving Stolen Computer Resource
E. Section 66C – Identity Theft
F. Section 66D – Cheating by Personation (Online Fraud)
G. Section 66E – Violation of Privacy
H. Section 66F – Cyber Terrorism

Correct answer: F — Section 66D: Cheating by Personation Using a Computer Resource.

Reason / legal application: The criminal impersonates a bank through a fake website and deceives users into disclosing credentials. Section 66D is the best listed fit where cheating by personation is carried out using a computer resource or communication device. Stolen credentials may then enable further fraud.

Ethical and security interpretation: Ethical principle: report phishing sites, verify website addresses, and never share OTPs or passwords with unverified parties.

6) A student installs a keylogger on the department computer to capture the usernames and passwords of faculty members.

A. Section 43 – Unauthorized Access
B. Section 65 – Tampering with Source Code
C. Section 66 – Computer Related Offence (Hacking)
D. Section 66B – Receiving Stolen Computer Resource
E. Section 66C – Identity Theft
F. Section 66D – Cheating by Personation (Online Fraud)
G. Section 66E – Violation of Privacy
H. Section 66F – Cyber Terrorism

Correct answer: C — Section 66: Computer-Related Offences, if the statutory requirements are met.

Reason / legal application: A keylogger is used to secretly collect credentials without permission. The conduct may involve an act under Section 43, and Section 66 may apply where such an act is done dishonestly or fraudulently. Section 66C may also be relevant if credentials are later used in the manner specified by that section.

Ethical and security interpretation: Ethical principle: security tools must only be used with authorization.

Secretly capturing credentials violates confidentiality and can enable further intrusions

7) A person knowingly purchases a stolen of>ice laptop containing con>idential company information because it is available at a very low price.

A. Section 43 – Unauthorized Access
B. Section 65 – Tampering with Source Code
C. Section 66 – Computer Related Offence (Hacking)
D. Section 66B – Receiving Stolen Computer Resource
E. Section 66C – Identity Theft
F. Section 66D – Cheating by Personation (Online Fraud)
G. Section 66E – Violation of Privacy
H. Section 66F – Cyber Terrorism

Correct answer: D — Section 66B: Dishonestly Receiving a Stolen Computer Resource or Communication Device.

Reason / legal application: Section 66B addresses dishonestly receiving or retaining a stolen computer resource or communication device, where the person knows or has reason to believe it is stolen. The scenario explicitly says the buyer knows the laptop is stolen.
Ethical and security interpretation: Ethical principle: do not purchase or access a stolen device; report it to the appropriate authority and protect any data on it.

8) A student secretly records another student inside the hostel bathroom and shares the video in a Telegram group.

A. Section 43 – Unauthorized Access
B. Section 65 – Tampering with Source Code
C. Section 66 – Computer Related Offence (Hacking)
D. Section 66B – Receiving Stolen Computer Resource
E. Section 66C – Identity Theft
F. Section 66D – Cheating by Personation (Online Fraud)
G. Section 66E – Violation of Privacy
H. Section 66F – Cyber Terrorism

Correct answer: G — Section 66E: Violation of Privacy, if its specific statutory conditions are met.
Reason / legal application: Section 66E concerns capturing, publishing, or transmitting images of a person's private area without consent in the circumstances specified by the law. A bathroom recording is a serious privacy violation, but the exact application of Section 66E depends on the content and statutory elements. Other laws may also apply.
Ethical and security interpretation: Ethical principle: never record or distribute another person's private activities without consent. Sharing the recording magnifies harm to the victim.

9) A hacker gains access to a university server, downloads examination question papers, and deletes the original >iles before leaving.

A. Section 43 – Unauthorized Access
B. Section 65 – Tampering with Source Code
C. Section 66 – Computer Related Offence (Hacking)
D. Section 66B – Receiving Stolen Computer Resource
E. Section 66C – Identity Theft
F. Section 66D – Cheating by Personation (Online Fraud)
G. Section 66E – Violation of Privacy
H. Section 66F – Cyber Terrorism

Correct answer: C — Section 66: Computer-Related Offences, if the statutory requirements are met.
Reason / legal application: The hacker accesses the server without permission, downloads confidential papers, and deletes files. These acts threaten confidentiality, integrity, and availability. Section 43 may cover relevant unauthorized acts; Section 66 may apply if a Section 43 act is committed dishonestly or fraudulently.

Ethical and security interpretation: Ethical principle: authorized testing must not involve stealing examination materials or deleting data. Vulnerabilities should be reported without disrupting systems.

10) An employee leaks con>idential patient medical records to a news agency after completing an authorized security audit.

A. Section 43 – Unauthorized Access
B. Section 65 – Tampering with Source Code
C. Section 66 – Computer Related Offence (Hacking)
D. Section 66B – Receiving Stolen Computer Resource
E. Section 66C – Identity Theft
F. Section 66D – Cheating by Personation (Online Fraud)
G. Section 66E – Violation of Privacy
H. Section 66F – Cyber Terrorism

Correct answer: No listed option is a clear general fit. G — Section 66E is relevant only if its specific requirements are met.
Reason / legal application: Authorization to conduct an audit does not authorize disclosure of patient records. Section 66E specifically concerns certain violations involving images of a person's private area; disclosure of medical records alone does not automatically establish that offence. Confidentiality, data-protection, contractual, or other legal rules may apply depending on the facts.
Ethical and security interpretation: Ethical principle: audit findings and sensitive records must be shared only with authorized recipients, using approved disclosure channels.

11) A hacker launches ransomware against a private hospital, encrypting all patient records and demanding ₹50 lakh to restore access.

A. Section 43 – Unauthorized Access
B. Section 65 – Tampering with Source Code
C. Section 66 – Computer Related Offence (Hacking)
D. Section 66B – Receiving Stolen Computer Resource
E. Section 66C – Identity Theft
F. Section 66D – Cheating by Personation (Online Fraud)
G. Section 66E – Violation of Privacy
H. Section 66F – Cyber Terrorism

Correct answer: C — Section 66: Computer-Related Offences, if the statutory requirements are met.
Reason / legal application: Encrypting patient records without authorization and demanding payment can interfere with access to computer data. Section 43 may apply to relevant acts; Section 66 may apply if an act covered by Section 43 is done dishonestly or fraudulently. The precise charges depend on evidence and applicable law.
Ethical and security interpretation: Ethical principle: ransomware threatens data availability and patient care.

Ethical security work should focus on authorized testing, backups, prevention, and incident response.

12) A fraudster calls senior citizens pretending to be a bank manager and convinces them to share OTPs, stealing money from their accounts.

A. Section 43 – Unauthorized Access
B. Section 65 – Tampering with Source Code
C. Section 66 – Computer Related Offence (Hacking)
D. Section 66B – Receiving Stolen Computer Resource
E. Section 66C – Identity Theft
F. Section 66D – Cheating by Personation (Online Fraud)
G. Section 66E – Violation of Privacy
H. Section 66F – Cyber Terrorism

Correct answer: F — Section 66D: Cheating by Personation Using a Computer Resource, where its requirements are met.
Reason / legal application: The fraudster impersonates a trusted bank official to deceive victims into revealing OTPs and then steals money. Section 66D may apply when cheating by personation is committed using a computer resource or communication device. Other fraud provisions may also be relevant.
Ethical and security interpretation: Ethical principle: customers should verify callers through official channels and never disclose OTPs or passwords to callers

13) A college student modifies the attendance software source code so that his attendance automatically becomes 100%.

A. Section 43 – Unauthorized Access
B. Section 65 – Tampering with Source Code
C. Section 66 – Computer Related Offence (Hacking)
D. Section 66B – Receiving Stolen Computer Resource
E. Section 66C – Identity Theft
F. Section 66D – Cheating by Personation (Online Fraud)
G. Section 66E – Violation of Privacy
H. Section 66F – Cyber Terrorism

Correct answer: B — Section 65: Tampering with Computer Source Documents, if its statutory requirements are met.
Reason / legal application: The student changes software to falsify an attendance record. Section 65 may apply if the source-code alteration meets the section's specific requirements; Section 66 may also be relevant if a Section 43 act is committed dishonestly or fraudulently.
Ethical and security interpretation: Ethical principle: manipulating academic records is dishonest and undermines integrity and fairness. Access to systems does not authorize falsifying records.

14) A hacker replaces the homepage of a government website with political slogans and threatening messages.

A. Section 43 – Unauthorized Access
B. Section 65 – Tampering with Source Code
C. Section 66 – Computer Related Offence (Hacking)
D. Section 66B – Receiving Stolen Computer Resource
E. Section 66C – Identity Theft
F. Section 66D – Cheating by Personation (Online Fraud)
G. Section 66E – Violation of Privacy
H. Section 66F – Cyber Terrorism

Correct answer: C — Section 66: Computer-Related Offences, if the statutory requirements are met.
Reason / legal application: Website defacement involves unauthorized alteration of a website. Section 43 may apply to the relevant act, and Section 66 may apply if the statutory conditions are met. Defacement alone does not automatically establish cyberterrorism under Section 66F.
Ethical and security interpretation: Ethical principle: testing must be authorized and must not deface or disrupt public services. Website integrity and public trust must be protected.

15) A software tester copies the unreleased source code of his company and uploads it to GitHub after resigning.

A. Section 43 – Unauthorized Access
B. Section 65 – Tampering with Source Code
C. Section 66 – Computer Related Offence (Hacking)
D. Section 66B – Receiving Stolen Computer Resource
E. Section 66C – Identity Theft
F. Section 66D – Cheating by Personation (Online Fraud)
G. Section 66E – Violation of Privacy
H. Section 66F – Cyber Terrorism

Correct answer: No listed option is a clear fit on these facts. Section 65 applies only if its specific statutory requirements are met.
Reason / legal application: Publishing unreleased source code without permission may breach confidentiality, contractual duties, copyright, or other applicable rules. Section 65 does not automatically cover every unauthorized copying or publication of source code; the exact facts matter.
Ethical and security interpretation: Ethical principle: proprietary source code must be protected and disclosed only with permission or through authorized reporting channels.

16) A person uses another individual's Aadhaar number and mobile OTP to open a fake bank account.

A. Section 43 – Unauthorized Access
B. Section 65 – Tampering with Source Code
C. Section 66 – Computer Related Offence (Hacking)
D. Section 66B – Receiving Stolen Computer Resource
E. Section 66C – Identity Theft
F. Section 66D – Cheating by Personation (Online Fraud)
G. Section 66E – Violation of Privacy
H. Section 66F – Cyber Terrorism

Correct answer: E — Section 66C: Identity Theft.
Reason / legal application: Section 66C addresses fraudulent or dishonest use of another person's electronic signature, password, or other unique identification feature. Using another person's identity credentials to open a bank account is the strongest listed fit, and cheating or financial-fraud provisions may also be relevant.
Ethical and security interpretation: Ethical principle: identity credentials and OTPs must be protected and never used without authorization.

17) A student accesses the college Wi-Fi controller without authorization and disconnects internet access for the entire campus.

A. Section 43 – Unauthorized Access
B. Section 65 – Tampering with Source Code
C. Section 66 – Computer Related Offence (Hacking)
D. Section 66B – Receiving Stolen Computer Resource
E. Section 66C – Identity Theft
F. Section 66D – Cheating by Personation (Online Fraud)
G. Section 66E – Violation of Privacy
H. Section 66F – Cyber Terrorism

Correct answer: C — Section 66: Computer-Related Offences, if the statutory requirements are met.
Reason / legal application: Unauthorized access to a network controller and disabling service threatens network availability. Section 43 may cover relevant unauthorized acts, and Section 66 may apply if a covered act is committed dishonestly or fraudulently.
Ethical and security interpretation: Ethical principle: network tests must be authorized, scoped, and designed to avoid service disruption

18) A hacker attacks the control system of an electricity distribution station to create a citywide power outage.

A. Section 43 – Unauthorized Access
B. Section 65 – Tampering with Source Code
C. Section 66 – Computer Related Offence (Hacking)

D. Section 66B – Receiving Stolen Computer Resource
E. Section 66C – Identity Theft
F. Section 66D – Cheating by Personation (Online Fraud)
G. Section 66E – Violation of Privacy
H. Section 66F – Cyber Terrorism

Correct answer: H — Section 66F: Cyberterrorism, if the statutory requirements are met.
Reason / legal application: Electricity distribution is critical infrastructure, and disrupting its control system may threaten public safety and essential services. Section 66F may apply only if the specific statutory conditions for cyberterrorism, including relevant intent or consequences, are satisfied. Other computer-related offences may also apply.
Ethical and security interpretation: Ethical principle: critical infrastructure testing requires explicit legal authorization, strict safety controls, and coordination with the responsible organization.

19) A company gives an ethical hacker permission to test only its website. Instead, he also scans the company's internal HR server without approval.
A. Section 43 – Unauthorized Access
B. Section 65 – Tampering with Source Code
C. Section 66 – Computer Related Offence (Hacking)
D. Section 66B – Receiving Stolen Computer Resource
E. Section 66C – Identity Theft
F. Section 66D – Cheating by Personation (Online Fraud)
G. Section 66E – Violation of Privacy
H. Section 66F – Cyber Terrorism

Correct answer: A — Section 43: Unauthorized Access, if the scanning constitutes a covered unauthorized act.
Reason / legal application: Permission was limited to the website. Scanning the internal HR server exceeds the agreed scope and may expose employee information. Section 43 may apply depending on the exact activity and statutory requirements.
Ethical and security interpretation: Ethical principle: follow the written scope, stop when an out-of-scope system is encountered, and obtain explicit approval before testing it.

20) A student discovers his teacher's Gmail password written on a sticky note and logs in to view con>idential question papers.

A. Section 43 – Unauthorized Access
B. Section 65 – Tampering with Source Code
C. Section 66 – Computer Related Offence (Hacking)
D. Section 66B – Receiving Stolen Computer Resource
E. Section 66C – Identity Theft
F. Section 66D – Cheating by Personation (Online Fraud)
G. Section 66E – Violation of Privacy
H. Section 66F – Cyber Terrorism

Correct answer: A — Section 43: Unauthorized Access.

Reason / legal application: Knowing or finding a password does not mean the student has permission to use the account. Accessing the teacher's account to view confidential examination materials is unauthorized. Section 66 may also be relevant if the applicable Section 43 act is done dishonestly or fraudulently.
Ethical and security interpretation: Ethical principle: report exposed credentials to the owner or administrator; do not use them or access confidential information.

21) A person edits another person's private photographs using AI and shares the manipulated images online to humiliate them.

A. Section 43 – Unauthorized Access
B. Section 65 – Tampering with Source Code
C. Section 66 – Computer Related Offence (Hacking)
D. Section 66B – Receiving Stolen Computer Resource
E. Section 66C – Identity Theft
F. Section 66D – Cheating by Personation (Online Fraud)
G. Section 66E – Violation of Privacy
H. Section 66F – Cyber Terrorism

Correct answer: No listed option clearly covers every version of this scenario. G — Section 66E may apply only if its specific requirements are met.
Reason / legal application: AI-manipulated images shared without consent can violate privacy and dignity. Section 66E is limited to specified acts involving images of a person's private area, so it does not automatically apply to every manipulated photograph. Other provisions may apply depending on the content and circumstances.
Ethical and security interpretation: Ethical principle: do not use AI tools to impersonate, harass, humiliate, or exploit others. Report abusive content through appropriate channels.

22) A hacker creates fake customer-care numbers on Google Search and tricks users into installing remote-access software.

A. Section 43 – Unauthorized Access
B. Section 65 – Tampering with Source Code
C. Section 66 – Computer Related Offence (Hacking)
D. Section 66B – Receiving Stolen Computer Resource
E. Section 66C – Identity Theft
F. Section 66D – Cheating by Personation (Online Fraud)
G. Section 66E – Violation of Privacy
H. Section 66F – Cyber Terrorism

Correct answer: F — Section 66D: Cheating by Personation Using a Computer Resource, where its requirements are met.
Reason / legal application: The attacker impersonates legitimate customer support and deceives users into installing remote-access software. Section 66D may apply to cheating by personation using a computer resource or communication device. Unauthorized remote access may raise additional issues under Sections 43 and 66.
Ethical and security interpretation: Ethical principle: verify support numbers through official websites and never grant remote access to unverified callers.

23) A government employee intentionally deletes source code used in a public service portal before retirement.

A. Section 43 – Unauthorized Access
B. Section 65 – Tampering with Source Code
C. Section 66 – Computer Related Offence (Hacking)
D. Section 66B – Receiving Stolen Computer Resource
E. Section 66C – Identity Theft
F. Section 66D – Cheating by Personation (Online Fraud)
G. Section 66E – Violation of Privacy
H. Section 66F – Cyber Terrorism

Correct answer: B — Section 65: Tampering with Computer Source Documents, if its statutory requirements are met.
Reason / legal application: Deleting source code may impair maintenance and availability. Section 65 may apply if the conduct satisfies the section's requirements; Section 43 may also be relevant if the deletion is an unauthorized act covered by that section.
Ethical and security interpretation: Ethical principle: protect source code through access controls, backups, version control, change management, and proper handover.

24) A hacker accesses a military communication server and attempts to disrupt defence operations.

A. Section 43 – Unauthorized Access
B. Section 65 – Tampering with Source Code
C. Section 66 – Computer Related Offence (Hacking)
D. Section 66B – Receiving Stolen Computer Resource
E. Section 66C – Identity Theft
F. Section 66D – Cheating by Personation (Online Fraud)
G. Section 66E – Violation of Privacy
H. Section 66F – Cyber Terrorism

Correct answer: H — Section 66F: Cyberterrorism, if the statutory requirements are met.
Reason / legal application: The target is sensitive defence infrastructure, and the attempt may threaten national security. Section 66F applies only if the statutory elements of cyberterrorism are established; Sections 43 and 66 may also be relevant to unauthorized access and related acts.
Ethical and security interpretation: Ethical principle: military and defence systems must only be tested under explicit legal authorization and stringent safety controls.

25) A college student writes a worm that automatically spreads to every computer in the laboratory, slowing down all systems.

A. Section 43 – Unauthorized Access
B. Section 65 – Tampering with Source Code

C. Section 66 – Computer Related Offence (Hacking)
D. Section 66B – Receiving Stolen Computer Resource
E. Section 66C – Identity Theft
F. Section 66D – Cheating by Personation (Online Fraud)
G. Section 66E – Violation of Privacy
H. Section 66F – Cyber Terrorism

Correct answer: C — Section 66: Computer-Related Offences, if the statutory requirements are met.

Reason / legal application: A worm spreads automatically and degrades system performance. Section 43 may apply to relevant unauthorized acts, and Section 66 may apply if a covered act is committed dishonestly or fraudulently. The facts and applicable law determine the exact offence.

Ethical and security interpretation: Ethical principle: malware research must be confined to controlled, isolated environments and conducted with appropriate authorization.

RUBRICS

Criteria	Weightage (%)	Level 4 (Exemplary)	Level 3 (ProWicient)	Level 2 (Developing)	Level 1 (Beginning)
IdentiWication of Cybersecurity Offences	25%	Correctly identi>ies all relevant cyber offences and applicable legal provisions for the given scenarios.	Correctly identi>ies most offences with minor errors.	Identi>ies some offences but confuses applicable provisions in several cases.	Fails to identify major cyber offences or applicable provisions.
Application of Legal Frameworks	25%	Accurately applies relevant legal provisions to each scenario with clear understanding of the underlying offence.	Applies legal provisions correctly to most scenarios with minor inaccuracies.	Applies some provisions correctly but provides limited understanding of their applicability.	Unable to appropriately apply legal provisions to the scenarios.
Ethical and Security Interpretation	30%	Demonstrates excellent understanding of unauthorized access, privacy, integrity, identity theft, cybercrime, and ethical responsibilities through accurate scenario interpretation.	Correctly interprets most ethical and security issues with minor omissions.	Identi>ies basic ethical/security issues but provides limited interpretation.	Demonstrates little understanding of the ethical or security implications.
Accuracy and Decision Making	20%	Provides consistently accurate decisions and demonstrates strong reasoning when distinguishing between different cyber offences.	Provides mostly accurate decisions with minor mistakes.	Provides partially correct decisions with several inconsistencies.	Responses are largely incorrect, incomplete, or unrelated to the scenarios.
